INTRODUCTION	7
TIDAL LEVELS OF PERMANENT TIDE GAUGE STATIONS	8
TIDE TABLES FOR BAR AND DOBRA LUKA.....	9

PREFACE

The Tide Tables for year 2006 are based on data recorded at two permanent tide gauge stations that exist on Serbia and Montenegro coast of Adriatic Sea. Tidal analysis and predictions are done by using of Sea Level Data Processing software written by Patric Caldwell at University of Hawaii Sea Level Center and includes M.G.G. Foreman's tidal analysis and prediction routines.

This publication is designed for all navigators, and especially it may be useful for the owners of small vessels (yachts, sailing yachts, boats, etc.); i.e. as for those dealing with this activity, as well as for others staying in this part of the Adriatic Sea for recreational and tourist reasons (nautical tourism).

Part I gives Tidal Levels of Permanent Tide Gauge Stations and their mutual differences.

Part II gives predictions of high and low waters for these places grouped by months

ALL TIMES OF PREDICTIONS ARE GIVEN IN THE OFFICIAL STANDARD TIME KEPT AT THE PLACE. No adjustment has been made for Daylight Saving Time (Summer Time) period.

ALL PREDICTED HEIGHTS ARE GIVEN IN CENTIMETRES above Lowest Astronomical Tide Datum (LAT) and are computed for average meteorological conditions.

METEOROLOGICAL CONDITIONS WHICH DIFFER FROM THE AVERAGE WILL CAUSE CORRESPONDING DIFFERENCES BETWEEN THE PREDICTED AND THE ACTUAL TIDE.

Naval Hydrographic Institute
of Serbia and Montenegro

INTRODUCTION

1. GENERAL

Predictions are based on continuous observation of the tide over a period of at least one year. As predictions are given for average meteorological conditions it follows that when conditions are not average the actual tides may differ from those predicted. Under extreme conditions these differences can be very large.

2. TIDAL LEVELS

Tidal levels given in Part I are calculated on continuous observations over a period of at least six years. Lowest Astronomical Tide (LAT) is calculated based on predictions made for period from years 2006 to 2010. All levels are given in centimetres above tide gauge zero. Minimal and maximal values are given as illustration of extreme meteorological conditions and should not be used for any other purposes.

3. METEOROLOGICAL EFFECTS ON TIDES

Meteorological conditions which differ from the average will cause corresponding differences between the predicted and the actual tide. Variations in tidal heights are mainly caused by strong or prolonged winds and by unusually high or low barometric pressure. Differences between predicted and actual times of high and low water are caused mainly by wind and differences in levels are mostly caused by barometric pressure. Tidal predictions are computed for average barometric pressure so difference from the average of 34 millibars can cause a difference in height of about 30 cm. A low barometer will tend to rise sea level and a high barometer will tend to depress it.

4. TIME ZONE

All times are given in the official standard time that is UTC+1 for this region. No adjustment has been made for Daylight Saving Time (Summer Time) period.

5. TIDAL PREDICTION AND CHART DATUMS

Tidal predictions given in this publication are referred to Lowest Astronomical Tide (LAT) Datum. Most of charts that covers Serbia and Montenegro waters are referred to Mean Lowest Low Water Spring (MLLWS) Datum.

Tidal Levels of Permanent Tide Gauge Stations

levels are in cm above gauge zero
